IN THE COURT OF APPEALS OF THE STATE OF OREGON

ROBERTA HAAS and KEVIN HAAS,
Plaintiffs-Appellants,

v.

THE ESTATE OF MARK STEVEN CARTER and
STATE FARM MUTUAL AUTOMOBILE INSURANCE COMPANY,
Defendants-Respondents,

and

GERALD CAMPBELL,
Defendant.

Multnomah County Circuit Court
16CV24579

A169932

Jerry B. Hodson, Judge.

Argued and submitted on January 11, 2021.

Kathryn H. Clarke argued the cause and filed the briefs for appellants.

Leslie A. Kocher-Moar argued the cause for respondent The Estate of Mark Steven Carter. Also on the brief was MacMillan, Scholz & Marks, P.C.

Ralph C. Spooner argued the cause for respondent State Farm Mutual Automobile Insurance Company. Also on the brief were David E. Smith and Spooner & Much, PC.

Before Lagesen, Presiding Judge, and James, Judge, and Hadlock, Judge pro tempore.

HADLOCK, J. pro tempore.

Affirmed.

James, J., concurring.

DESIGNATION OF PREVAILING PARTY AND AWARD OF COSTS

Prevailing party: Respondents

- No costs allowed.
 Costs allowed, payable by Appellants.
 Costs allowed, to abide the outcome on remand, payable by
-

1 HADLOCK, J. pro tempore

2 This appeal raises issues about two uniform jury instructions regarding
3 causation--the "but for" instruction and the "substantial factor" instruction--that may be
4 given in negligence cases. Here, the underlying litigation related to an automobile
5 collision in which a car driven by defendant Carter struck plaintiffs' car from the rear.
6 Both plaintiffs later had surgery related to neck and back pain and other symptoms, and
7 they sued Carter in negligence, seeking to recover medical expenses and other damages.
8 Before trial, plaintiffs asked the court to deliver both of the uniform jury instructions
9 related to causation, but the trial court gave only the but-for instruction. The jury
10 returned a defense verdict. On appeal, plaintiffs argue that the court erred when it
11 refused to deliver the substantial-factor jury instruction as a supplement to the but-for
12 instruction. Plaintiffs advocate for a rule that would require a substantial-factor
13 instruction to be given in all cases in which there is evidence that the plaintiffs had
14 underlying conditions that made them more susceptible to injury. We decline to adopt
15 such a rule, and we reject plaintiffs' contention that the trial court erred by not giving the
16 substantial-factor instruction in this case. Accordingly, we affirm.

17 We briefly summarize the evidence pertinent to the issue raised on appeal
18 although, when analyzing whether the trial court erred when it declined to give plaintiffs'
19 requested instruction, we ultimately view the evidence in the light most favorable to
20 plaintiffs. *See State v. Heaton*, 310 Or App 42, 46, 483 P3d 1209, *rev den*, 368 Or 637
21 (2021) (reviewing evidence in the light most favorable to the party who requested an

1 instruction that the trial court refused to deliver). It is undisputed that a car driven by
2 defendant Carter struck the back of the stopped car in which plaintiffs were sitting, at a
3 relatively low speed. Plaintiff Roberta Haas experienced pain soon after the collision.
4 Several months later, she was still experiencing pain, sought medical advice, and
5 ultimately had spinal-fusion surgery. Plaintiff Kevin Haas, who also experienced pain
6 after the collision, had disc-replacement surgery a few years later. Plaintiffs presented
7 medical evidence from which a jury could find that the automobile collision involved
8 speed and forces sufficient to cause the injuries for which plaintiffs later sought surgical
9 and other treatment. Plaintiffs' evidence also supported their claim that, in fact, the
10 collision did cause those injuries. Defendants presented contrary evidence suggesting
11 that the speed and forces involved in the collision were not sufficient to cause plaintiffs'
12 injuries.

13 The record also includes evidence that both plaintiffs had underlying
14 conditions that made them more vulnerable to suffering the types of injuries for which
15 they sought treatment after the collision. In particular, the evidence established that
16 Roberta Haas had had multiple previous spinal surgeries that included removal of
17 vertebrae and implantation of medical hardware. The surgeon who operated on Roberta
18 Haas after the collision deemed the precollision condition of her spine to be "a mess." He
19 testified that, given her underlying condition, he would not have been surprised if she
20 presented with the same symptoms that prompted him to perform surgery even in the
21 absence of a car accident. The surgeon agreed with a suggestion by defense counsel that,

1 "Many factors may operate either independently or together to cause
2 injury. In such a case, each may be a cause of the injury even though the
3 others by themselves would have been sufficient to cause the same injury.

4 "If you find that the defendants' act or omission was a substantial
5 factor in causing the injury to the plaintiff, you may find that the
6 defendants' conduct caused the injury even though it was not the only
7 cause. A substantial factor is an important factor and not one that is
8 insignificant."

9 (Boldface in original; footnote omitted.)

10 In a written memorandum supporting their request for the substantial-factor
11 instruction, plaintiffs relied on the Supreme Court's discussion of causation instructions
12 in *Joshi v. Providence Health System*, 342 Or 152, 149 P3d 1164 (2006). In *Joshi*, the
13 court explained that the but-for causation instruction applies in most negligence cases and
14 requires "a plaintiff [to] demonstrate that the defendant's negligence more likely than not
15 cause the plaintiff's harm." *Id.* at 162. However, the court also identified three categories
16 of cases involving multiple causes in which the but-for instruction "fails" and a
17 substantial-factor instruction applies, including when "a similar, but not identical result
18 would have followed without the defendant's act." *Id.* at 161 (quoting W. Page Keeton,
19 *Prosser and Keeton on the Law of Torts* 267-68 (5th ed 1984)). Plaintiffs argued that this
20 case falls into that category of cases. Plaintiffs relied on evidence of their underlying
21 conditions to support that argument, contending that "both plaintiffs' degenerative
22 conditions, and plaintiff Roberta Haas's prior susceptibility to injury, mean that a similar
23 result to that which eventually occurred in this case--a lumbar fusion surgery--might have
24 eventually taken place" even though "the timing of that surgery was directly influenced

1 by" the collision.

2 At a hearing on the requested jury instructions, the trial court suggested that
3 it was not persuaded by plaintiffs' argument, viewing their concern about underlying
4 conditions as being "addressed by the infirm condition instruction that you take your
5 plaintiff the way that they are, as opposed to a causation issue where I give a substantial
6 factor instruction." The court also noted its recollection that the substantial-factor
7 instruction applies "when you have multiple actors potentially at the same time."
8 Nonetheless, the court said that it would consider the issue further. Ultimately, the court
9 rejected plaintiffs' request for the substantial-factor instruction, apparently without further
10 explanation on the record. In keeping with that ruling, the court delivered only a single
11 jury instruction about causation: the but-for instruction.³ The jury returned a verdict for
12 defendants.

13 On appeal, plaintiffs reiterate their argument that they were entitled to a

³ As discussed briefly later in this opinion, the court also delivered the uniform "previous infirm condition" instruction about plaintiffs' entitlement to damages if the jury determined that either plaintiff "had a bodily condition that predisposed him or her to be more subject to injury than a person in normal health." The court gave that instruction at plaintiffs' request. The instruction explained that, in such circumstances, defendants "would be liable for any and all injuries and damage that may have been suffered by the plaintiff as the result of the negligence of the defendant, even though those injuries, due to the prior condition may have been greater than those that would have been suffered by another person under the same circumstances." At the request of defendant Carter, the court also delivered an "aggravation" instruction, explaining that, if a defendant's negligence aggravated a plaintiff's previously symptomatic pre-existing injury or disability, then the plaintiff would be entitled only to those damages due to the aggravation.

1 substantial-factor instruction, which they characterize as supplementing the but-for
2 instruction on causation. Plaintiffs contend that the trial court was wrong when it
3 asserted that the instruction applies only in cases involving multiple tortfeasors. Instead,
4 they assert, the substantial-factor instruction is appropriate in cases involving "multiple
5 factors [that] were actual or potential *causes* of plaintiffs' physical conditions."
6 (Emphasis added.) However, plaintiffs do not identify evidence establishing a way in
7 which some particular event or condition other than the automobile collision caused (or
8 contributed to causing) their injuries. Rather, they assert broadly that "the evidence was
9 * * * clear that other causes were or could be involved; those other causes were addressed
10 in the testimony of every expert that testified." Viewed in the context of plaintiffs' other
11 arguments, it is clear that the "other causes" they reference are plaintiffs' underlying
12 infirmities.

13 In response, defendants argue, among other things, that this case does not
14 fall within any of the *Joshi* categories for which the but-for instruction is inadequate and
15 a substantial-factor instruction is required. That is so, defendants contend, because there
16 is no evidence of multiple causes acting concurrently to bring about an injurious event.
17 In that regard, Carter asserts that "[p]re-existing injuries or conditions are not *concurrent*
18 *causes* of injury to which a 'substantial factor' standard could apply." (Emphasis in
19 original.) State Farm argues similarly, contending that the evidence established only that
20 plaintiff Roberta Haas had spinal conditions that made her more susceptible to future
21 injury, not that those underlying conditions actually caused the injury for which she

1 sought damages. Moreover, Carter suggests that the trial court correctly viewed the
2 substantial-factor instruction as applying only when multiple tortfeasors are alleged to
3 have caused the plaintiff's injury.

4 We review the trial court's refusal to give plaintiffs' requested substantial-
5 factor instruction for legal error, viewing the evidence in the light most favorable to the
6 requesting parties. *Heaton*, 310 Or App at 46. "As a general rule, parties in a civil action
7 are entitled to jury instructions on their theory of the case if their requested instructions
8 correctly state the law, are based on the current pleadings in the case, and are supported
9 by evidence." *Vandevere-Pratt v. Portland Habilitation Center, Inc.*, 242 Or App 554,
10 557-58, 259 P3d 9 (2011) (internal quotation marks and citation omitted). "A trial court,
11 however, is not required to give a requested instruction if another instruction adequately
12 addresses the issue." *State v. Ashkins*, 357 Or 642, 648, 357 P3d 490 (2015). Error in
13 failing to give a requested instruction is not grounds for reversal "unless the error
14 'substantially affected' a party's rights." *Vandevere-Pratt*, 242 Or App at 558.

15 We begin our analysis by considering basic principles that apply in
16 ordinary negligence cases (those not involving special relationships or standards of
17 conduct). In such a case, the plaintiff must prove both foreseeability and causation: "[A]
18 plaintiff must establish that the defendant's conduct created a foreseeable and
19 unreasonable risk of legally cognizable harm to the plaintiff and that the conduct in fact
20 caused that kind of harm to the plaintiff." *Sloan v. Providence Health System-Oregon*,
21 364 Or 635, 643, 437 P3d 1097 (2019). As used in the negligence context, "the element

1 of 'causation' ordinarily refers to 'causation-in-fact' or 'but-for' causation." *Hammel v.*
2 *McCulloch*, 296 Or App 843, 851, 441 P3d 617, *rev den*, 365 Or 502 (2019). Thus, a
3 plaintiff ordinarily must establish "causation" by proving that, but for the defendant's
4 negligence, the plaintiff would not have suffered harm. *Id.* The uniform but-for jury
5 instruction reflects that way of looking at causation, explaining that the defendant's
6 conduct "is a cause of the plaintiff's injury if the injury would not have occurred *but for*
7 that conduct." UCJI 23.01 (emphasis added).

8 In cases involving multiple causes of a plaintiff's injury, however, a but-for
9 framing of the causation element may be inadequate. In such cases, instead of
10 conceptualizing causation in the "either/or" sense that the but-for instruction implies
11 (either a negligent act caused the injury or it did not), it can be more useful to think of
12 causation in terms of whether a particular defendant's negligence contributed to the injury
13 in an important or material way--*i.e.*, whether that negligence was a "substantial factor"
14 in causing the harm.⁴ *Cf. Lasley v. Combined Transport, Inc.*, 351 Or 1, 7, 261 P3d 1215
15 (2011) (describing "the 'substantial factor' test [as] a test of factual cause"). Thus, in
16 cases in which "'two tortfeasors acted concurrently to bring about' the plaintiff's injury, [a
17 jury may] hold each tortfeasor liable for those injuries, provided that the negligence of
18 each was a 'substantial factor' in causing the injuries." *Wright v. Turner*, 368 Or 207,

⁴ As we noted in *Towe v. Sacagawea, Inc.*, 246 Or App 26, 41, 264 P3d 184 (2011),
aff'd in part and rev'd in part on other grounds, 357 Or 74, 347 P3d 766 (2015), "the
term 'substantial factor' is somewhat amorphous," but generally "refers to an important or
material factor, and not one that is insignificant."

1 218, 489 P3d 102 (2021) (quoting *Joshi*, 342 Or at 162). The uniform substantial-factor
2 instruction reflects that way of looking at causation, explaining that, when multiple causal
3 factors "operate either independently or together to cause injury," any one of those factors
4 "may be a cause of the injury" so long as it "was a substantial factor in causing the
5 injury." UCJI 23.02.

6 As reflected in the cases cited above, the substantial-factor standard of
7 causation applies only in some negligence actions. That is, "the 'substantial factor'
8 standard has not supplanted the 'but for' or 'reasonable probability' standard of causation.
9 Instead, the two standards apply to different types of negligence cases." *Joshi*, 342 Or at
10 162; *see also State v. Turnidge (S059155)*, 359 Or 364, 471, 374 P3d 853 (2016), *cert*
11 *den*, ___ US ___, 137 S Ct 665 (2017) (citing *Joshi* discussion of causation standards
12 with approval); *Elk Creek Management Co. v. Gilbert*, 353 Or 565, 584, 303 P3d 929
13 (2013) (same). The substantial-factor instruction applies only in cases in which multiple
14 causes contribute to a plaintiff's injury, either because they act "concurrently" in causing
15 that harm or perhaps because (as described in other possible scenarios outlined in the
16 Prosser and Keeton treatise and mentioned in *Joshi*), given those multiple causes, "a
17 similar, but not identical result would have followed without the defendant's act" or the
18 defendant "has made a clearly proved but quite insignificant contribution to the result, as
19 where he throws a lighted match into a forest fire." *Joshi*, 342 Or at 161 (quoting
20 Keeton, *Prosser and Keeton on the Law of Torts* 267-68 (5th ed 1984)). The but-for
21 standard applies in all other ordinary negligence cases; indeed, it applies in "the majority

1 of cases." *Joshi*, 342 Or at 161-62.

2 The primary question before us is whether the evidence in this case
3 supported the giving of the substantial-factor instruction, so that it was error for the court
4 not to deliver it.⁵ As a preliminary matter, we briefly address--and reject--defendant
5 Carter's contention that the substantial-factor instruction applies only in cases in which
6 the actions of multiple *tortfeasors* combine or concur to cause the plaintiff's injury. *Joshi*
7 at least sometimes discusses the applicability of the substantial-factor instruction in cases
8 in which there are multiple *causes* of the plaintiff's injury; its analysis is not limited to
9 cases in which there are multiple tortfeasors. 342 Or at 161-62. And, although some
10 other cases use phrases like "multiple tortfeasors" in discussing the standard, we perceive
11 that wording to reflect only the facts of those particular cases--*e.g.*, that the plaintiffs
12 alleged that the actions of multiple tortfeasors contributed to causing their injuries. *See*,
13 *e.g.*, *Lasley*, 351 Or at 6-7 (discussing substantial-factor test in the context of a case
14 involving multiple alleged tortfeasors). We conclude that any cause of a plaintiff's injury
15 should be considered as part of the causal analysis whether or not that cause was the
16 result of a negligent act. *Cf. Box v. Oregon State Police*, 311 Or App 348, 369, 492 P3d
17 685, *adh'd to as modified on recons*, 313 Or App 802, 492 P3d 1292 (2021) ("[W]here
18 there are multiple causes-in-fact of a plaintiff's injury, some of those causes may be non-
19 negligent acts. A defendant whose negligent act is a cause of the plaintiff's injury is not

⁵ Defendants do not contend that the uniform instruction requested by plaintiffs misstates the law; they argue only that the instruction does not apply in this case.

1 necessarily absolved of legal liability for that negligent act, merely because other, non-
2 negligent conduct was also a cause of the plaintiff's injury.").

3 The question remains whether plaintiffs have established that the evidence
4 in this case supported delivery of the substantial-factor instruction. We conclude that
5 they have not.

6 We observe that the focus of plaintiffs' argument has evolved, on appeal,
7 from the argument they presented below. In arguing to the trial court that it should give
8 the substantial-factor instruction, plaintiffs asserted that their circumstances--particularly
9 Roberta Haas's circumstances--fit within the category of cases, described in Prosser and
10 Keeton and mentioned in *Joshi*, in which "a similar, but not identical result would have
11 followed without the defendant's act." That argument was based primarily on plaintiffs'
12 contention that Roberta Haas's spine had been so infirm before the automobile collision
13 that she "might have eventually" needed lumbar fusion surgery even absent the
14 automobile collision. On appeal, plaintiffs no longer focus on the *Joshi* categories, on
15 Roberta Haas's particular infirmities, or on the possibility that she would have needed
16 surgery in any event.⁶ Moreover, plaintiffs do not point to evidence regarding any
17 mechanism by which either plaintiff's underlying infirm conditions *caused* their injuries,
18 symptoms, or need for surgery. Thus, for example, plaintiffs do not argue that the

⁶ Because plaintiffs do not argue on appeal that this case fits within the category of cases described in Prosser and Keeton as those in which a substantial-factor instruction is appropriate because "a similar, but not identical result would have followed without the defendant's act," we do not address the scope of that particular category of cases.

1 medical hardware that had previously been implanted in Roberta Haas's spine somehow
2 contributed to causing one of the injuries that she suffered during the automobile
3 accident, or one of the symptoms that arose thereafter.

4 Rather, plaintiffs now make a single, very specific argument. Relying on
5 evidence that their infirm conditions made them more susceptible to injury, plaintiffs
6 argue categorically that the substantial-factor jury instruction should be given in *every*
7 case where "a preexisting condition has been aggravated, or a prior infirm condition
8 makes the plaintiff more subject to injury." In those circumstances, plaintiffs contend,
9 "the underlying condition itself is *ipso facto* a causative factor" that requires the
10 substantial-factor instruction to be given.⁷ Plaintiffs have not identified any legal
11 authority supporting that proposition, and we are not aware of any.

12 We reject plaintiffs' categorical argument. We have explained in the
13 workers compensation context that there is a difference between underlying conditions
14 (or infirmities) that make a person more susceptible to injury and those conditions that
15 cause an injury. *E.g., Corkum v. Bi-Mart Corp.*, 271 Or App 411, 422-23, 350 P3d 585
16 (2015). In that context, we distinguish between (1) a "susceptibility," that is, an

⁷ The categorical nature of plaintiffs' argument is reflected in the fact that their arguments on appeal do not distinguish between Roberta Haas's significant underlying infirmities (which included a spine described as a "mess" following previous surgeries) and Kevin Haas's less momentous underlying infirmities (minor injuries following previous accidents and degenerative conditions consistent with his age). Again, plaintiffs have not attempted to identify a causal mechanism linking any of their underlying conditions to the specific injuries they suffered.

1 underlying condition that "increases the likelihood that the affected body part will be
2 injured by some other action or process but does not actively contribute to damaging the
3 body part" and (2) a "cause," that is a condition that actively contributes to a disability or
4 need for treatment. *Id.*; see also *SAIF v. Dunn*, 297 Or App 206, 217-18, 439 P3d 1011,
5 *rev den*, 365 Or 557 (2019) (applying *Corkum* and describing how medical evidence
6 could show a causal connection between the claimant's underlying condition, which was
7 a congenital "anatomical anomaly," and an inflammatory condition that he suffered); *id.*
8 at 208-09 (discussing other, similar holdings in the workers' compensation context and
9 noting that we have distinguished since 1991 between an underlying condition "that
10 contributes to the cause of [an occupational] disease" and a condition "that merely
11 renders the worker more susceptible but does not contribute to the cause").

12 Although the specific holdings in *Corkum* and similar cases were based on
13 the workers compensation statutes, we see no reason to apply a different understanding of
14 causation, as it relates to underlying conditions, in the context of a negligence case. That
15 is, we have recognized that there is a distinction--one that turns on the specific facts of
16 each case and often may best be explained by medical evidence--between an underlying
17 condition that merely makes a person more susceptible to injury and an underlying
18 condition that actively contributes to causing a person's injury. See *Dunn*, 297 Or App at
19 217-18 (whether a particular condition was "a mere susceptibility" was "a medical
20 question"). There is no reason that we should limit our recognition of that distinction to
21 the workers compensation context. Thus, we conclude that, in a negligence case, a

1 plaintiff's underlying condition can be said to be a cause of the plaintiff's injury only
2 when it actively contributes to causing the injury--that is, when some causal mechanism
3 links the underlying condition to the harm the plaintiff suffered. That undoubtedly will
4 be true in some cases, but we reject the proposition that it is true in *all* cases in which
5 plaintiffs' underlying conditions make them more susceptible to injury.

6 By its terms (as requested by plaintiffs) and consistently with *Joshi*, the
7 uniform substantial-factor instruction applies only when there are multiple causes of a
8 plaintiff's injury that act together or independently to cause an injury. In other negligence
9 cases--the majority of cases, according to *Joshi*--the but-for instruction is appropriate.
10 342 Or at 162. Here, plaintiffs have not identified anything other than defendant Carter's
11 negligent driving that caused their injuries. In particular, plaintiffs have not pointed to
12 specific evidence showing a *causal* link between any of their underlying conditions and
13 the injuries or symptoms for which they later sought treatment. Thus, plaintiffs have not
14 established that the evidentiary record supported their request for a substantial-factor
15 instruction. Evidence that plaintiffs' underlying conditions made them more susceptible
16 to injury was not enough, by itself, to require the trial court to deliver that instruction in
17 addition to the but-for instruction that plaintiffs had also requested.

18 For the same reasons, we are not persuaded that the jury instructions that
19 the trial court did deliver were inadequate to properly address the issue of causation in
20 this case. As plaintiffs had requested, the court delivered the uniform but-for jury
21 instruction on causation. That instruction correctly explained to the jury that defendants

1 would be liable for plaintiffs' injuries only if plaintiffs suffered those injuries as a result
2 of defendants' negligence. Also at plaintiffs' request, the court delivered the uniform
3 "previous infirm condition" instruction on damages. That instruction explained that, if
4 the jury found that a plaintiff "had a bodily condition that predisposed [them] to be more
5 subject to injury," defendants nevertheless "would be liable for any and all injuries and
6 damage" that the plaintiff suffered as a result of defendants' negligence, "even though
7 those injuries, due to the prior condition, may have been greater than those that would
8 have been suffered by another person under the same circumstances." UCJI 70.06. We
9 recognize that the "previous infirm condition" instruction relates, by its terms, to damages
10 and not to causation. Nonetheless, that instruction necessarily informs the jury that a
11 defendant's liability--which arises only if the defendant's negligence caused the plaintiff's
12 injury--is not negated by the fact that the plaintiff had an underlying condition that made
13 the plaintiff more susceptible to being injured. Thus, that instruction ameliorated any risk
14 that the jury might decide that defendants could not be held liable for injuries that
15 plaintiffs suffered as a result of the automobile collision if their underlying infirmities
16 made them particularly susceptible to that kind of harm. Under the circumstances present
17 here, no further instruction on causation was necessary.

18 Affirmed.
